Data Description:

The Lisan-Sudanese corpus (about 53K tokens) was manually collected from Facebook and YouTube comments. Each word in the corpus was annotated with different morphological features, such as POS, stem, prefixes, suffixes, lemma, and others. The annotation process was carried out by different annotators who are native speakers. The annotators were trained on a set of guidelines and on how to use our Arabic Dialect Annotation Toolkit (ADAT), which is open source. See this article [1] for details.

The folder contains of the following files:

1. **Raw Text Files:**
   The raw text is the set of all sentences in the Lisan - Sudanese corpus, stored as a CSV file (Lisan-Sudanese RowText_sentences.csv). The first column is the sentence id, and the second column is the sentence.

2. **Annotations File:**
   The annotations are stored as a CSV file (Lisan-Sudanese-dataset.csv), with the following columns:
   - **sentenceId:** Unique identifier for each sentence, which is repeated for individual tokens/rows. By concatenating these identical sentence IDs, you can reconstruct the full sentence.
   - **wordPosition:** The specific location of a word within a sentence.
   - **rawToken**: raw word as it appears in the corpus, without any modification.
   - **Token:** a normalized/unified writing of the token.
   - **Prefixes**: the set of prefixes and their POS, represented as: {⟨Prefix1/POS⟩ + ⟨Prefix2/POS⟩. . .}
   - **Stem:** the base word after removing suffixes and prefixes from the CODA.
   - **Suffixes:** the set of suffixes and their POS, represented as: {⟨Suffix1/POS⟩ + ⟨Suffix2/POS⟩. . .}
   - **POS:** The part-of-speech tag, one of the 41 tags. Examples: ADJ, NOUN_PROP, PV, IV, etc.
   - **MSALemma:** The MSA lemma. We used the lemmas in the Qabas lexicon.
   - **MSALemmaID:** The ID of the MSA lemma in the Qabas Lexicon. If the ID is 0 it means that the MSA Lemma is not mapped with a Qabas lemma yet.
   - **DALemma:** The dialect lemma. We used the lemmas in the Qabas lexicon.
   - **DALemmaID:** The ID of the dialect lemma in the Qabas Lexicon. If the ID is 0 it means that the dialect Lemma is not mapped with a Qabas lemma yet.
   - **Person:** The grammatical person, which can be 1st, 2nd, or 3rd person [1, 2, 3].
   - **Gender:** The gender, which can be Masculine, Feminine [m, f].
   - **Number:** The grammatical number, which can be singular, dual, plural [s, d, p].
   - **Gloss:** An informal semantic annotation in English.

3. **Tagset Translation** (tagset_translation.xlsx)**:**

is an Arabic-English translation of the tagsets, it contains four sheets: POS, Person, Gender, Number, Prefixes and Suffixes.
